

## Alaska's Ballot Counting System

Alaska uses three different methods to count ballots at the precinct level:

- ❖ Hand-count
- ❖ Optical Scan
- ❖ Touch Screen w/ voter verifiable paper trail.

Each precinct receives paper ballots that are either hand-counted when the polls close or counted using an optical scan unit as the voter inserts the ballot into the optical scan. In addition, during federal elections, each precinct has a touch screen voting unit that is intended for use by blind, disabled, or those voters who may not be able to read.

Alaska uses Premier Elections Solutions GEMS 1.18.24 ballot tabulation software to program the memory cards used in the optical scan and touch screen voting units. The software is federally certified. GEMS computers in the Director's Office and the regional offices are stand alone computers that are not connected to the internet or a network.

The Division's Election Program Manager is responsible for programming the election parameters in GEMS and creating the memory cards. The election program is then sent to the regional offices to download onto the regional GEMS computers.

**Hand-count** precincts are those precincts that are in rural areas of the state with few voters. After the polls close, the election boards tally the ballots using prepared tally books and then call in the results to the appropriate regional office. The regional offices then data enter the results into the regional GEMS computer and uploads the results to the GEMS system in the Director's Office via modem connection. There are 133 hand-count precincts in Alaska.

**Optical scan** precincts are those in the urban areas of the state or those that have a large number of voters. After the voter votes, the voter inserts his/her ballot into the optical scan unit which is attached to a ballot box. When the polls close, the election board ends the election and transmits the results via a telephone line directly to the GEMS system in the Director's Office. There are 305 optical scan precincts in Alaska.

**Touch screen** units used in Alaska have a voter verifiable paper trail that allows the voter to verify the printed version of the ballot prior to casting the ballot. When voting on a touch screen, the voter has the option of having the ballot on the screen and/or listen to an audio version of the ballot and using a keypad to make the selection. Like the optical scan, when the polls close, the election board ends the election on the touch screen and then transmit results either via telephone line (for optical scan precincts) or by calling in the results to the regional office (for hand-count precincts).

Testing is performed on all optical scan and touch screen units and memory cards. A functionality test is conducting to ensure the equipment is in proper working order. A logic and accuracy test is performed on each memory card to ensure the programming is counting the ballots correctly.
